

Contents

The ScienceWorld 1 package iv
Using the Teacher Edition ix
Essential Learnings checklist xii

1 Working in a laboratory

- 1.1 Laboratory equipment 2
- 1.2 Safety in the laboratory 7
- 1.3 Using a burner 10
- 1.4 Science is investigating 12

2 Science skills

- 2.1 Inferring and predicting 24
- 2.2 Measuring 29
- 2.3 Displaying data 37
- 2.4 Experimenting 39

3 Everyday reactions

- 3.1 What is a chemical reaction? 44
- 3.2 Some common gases 52

Doing a project

4 Forces

- 4.1 Forces around you 69
- 4.2 Friction 77
- 4.3 The pull of gravity 83

5 The living world

- 5.1 Classifying things 91
- 5.2 The five kingdoms 98
- 5.3 Animals and plants 105

6 Exploring space

- 6.1 Observing the night sky 116
- 6.2 Exploring the solar system 120
- 6.3 Stars and galaxies 131

7 Organisms in ecosystems

- 7.1 Living in a food web 139
- 7.2 Ecosystems 148
- 7.3 Living in groups 154

8 Mixing and separating

- 8.1 What's a mixture? 161
- 8.2 Solutions 162
- 8.3 Separating mixtures 168

9 Building blocks of life

- 9.1 Cells 183
- 9.2 Growth and reproduction 193
- 9.3 Reproduction and survival 197

10 What are things made of?

- 10.1 Properties of matter 206
- 10.2 Solid–liquid–gas 214
- 10.3 Using the particle theory 223

11 Electricity

- 11.1 Electric charges 230
- 11.2 Electric currents 237
- 11.3 Electric circuits 244

12 Energy in our lives

- 12.1 What is energy? 254
- 12.2 Forms of energy 257
- 12.3 Energy comes—energy goes 266

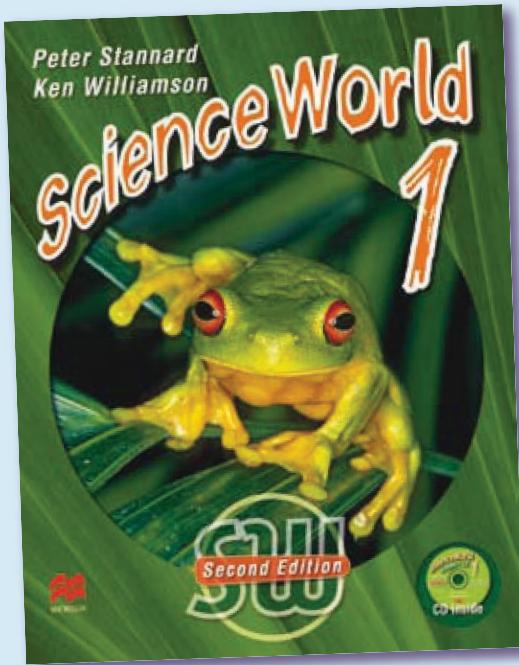

13 Rocks

- 13.1 Rocks from fire 276
- 13.2 Earth's changing face 282
- 13.3 The rock cycle 288

Glossary

Index

The ScienceWorld 1 package

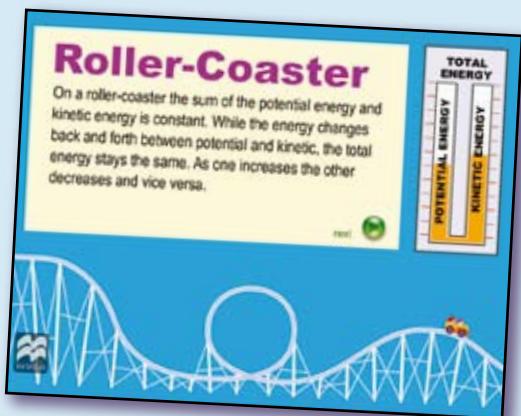

ScienceWorld 1 student book and CD

ScienceWorld 1 is designed to help teachers implement the Essential Learnings developed for the Queensland Curriculum and Reporting Framework (QCAR). *ScienceWorld 1* and *ScienceWorld 2* together provide adequate opportunities to develop all of the Essential Learnings students are required to achieve by the end of Year 9. The Essential Learnings checklist on pages xii–xiii indicates how this is done.

The student CD contains:

- PDFs of each chapter in the textbook
- animations
- Crossword Wizard crosswords (one for each chapter)
- ICT skillsheets.

Animations

- Using a Bunsen burner
- Fire extinguisher
- Motorcycle forces
- Froth flotation
- Particle theory
- Atoms
- Roller-coaster
- How limestone caves are formed
- How sedimentary rocks are formed

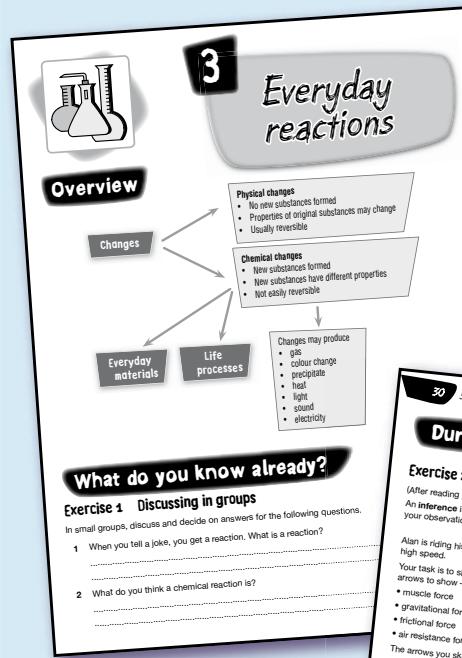

ICT skillsheets

- Getting started with Microsoft Word
- Getting started with Microsoft Word—drawings and pictures
- Getting started with Microsoft Word—tables and charts
- Getting started with Microsoft Excel
- Getting started with Microsoft PowerPoint
- Getting started with Google
- Getting started with dataloggers

ScienceWorld 1 Workbook

The workbook is designed to complement the text by developing students' literacy and *Ways of working* (Working scientifically) skills. It is designed to develop students' language and thinking skills so that they can:

- interact more effectively with the text
- speak and write in the various types of texts required in science
- apply higher-order thinking skills
- complement learning in other subject areas.

What do you know already?

Exercise 1 Discussing in groups

In small groups, discuss and decide on answers for the following questions.

- 1 When you tell a joke, you get a reaction. What is a reaction?

- 2 What do you think a chemical reaction is?

30 ScienceWorld 1 Workbook

During Reading

Exercise 2 Sketching and labelling
(After reading page 73)

An inference is an explanation you can give based on your observations. The inference may or may not be true.

Alan is riding his bicycle up a steep hill at high speed. Your task is to sketch and label four arrows to show —

- muscle force
- gravitational force
- frictional force
- air resistance force

The arrows you sketch should show —

- the direction of the force
- the relative strength of the force

Exercise 3 Using data tables and graphs
(After reading Measuring forces on page 74 and doing Investigate 13 on pages 77 and 78)

Matty decides to check whether friction is greater for heavy objects than for light objects. He uses a spring balance to pull a wooden block across the desk. Then he pulls two blocks, one on top of the other, then three ... Here are his results.

Number of blocks	Force needed to pull blocks (newtons)		
	Trial 1	Trial 2	Average
1	3.1	3.3	3.2
2	6.7	6.4	6.4
3	9.8	9.6	10.0
4	12.8	12.6	13.1

To calculate the average, add the results for the three trials and divide by 3.

1 Complete his data table by calculating the averages.

ScienceWorld 1 Teacher Edition and CD

The Teacher Edition of the textbook is in a larger format, reproducing the textbook pages with supporting teacher notes. The teacher CD contains:

- an Essential Learnings checklist
- animations
- crosswords
- chapter tests (multiple choice, short answer, long answer and practical) with answers
- assessment tasks and marking rubrics matched to the Essential Learnings assessable elements and descriptors.

ScienceWorld website

The website (www.scienceworld.net.au) contains links for the WebWatches in the text, and a course construction guide prepared as a template from which schools can develop their own work programs using the *ScienceWorld* series.

CATCH UP NEWS

BEETLEMANIA
November, 11 June 2006

CSIRO Entomologists (scientists who study insects) Dr Adam Slipinski and Dr John Lawrence are joining a large international team to work on the Beetle Tree of Life project.

If you thought there were lots of different beetles, you were right – 23,000 species described so far in Australia alone, and the real number is probably between 60,000 and 100,000!

Beetles come in all shapes, sizes and colours. They are multi-talented – many are plant feeders, some are predators and others are scavengers.

Fact of the week

Cicadas spend most of their life underground. Some of the large, common Australian species of cicada may live underground as nymphs for around 6-7 years. This explains why adult cicadas are much more abundant during some seasons than others, with peaks occurring periodically.

WEBwatch

Go to www.scienceworld.net.au and follow the links to the websites below.

Australian Antarctica Division—Science
This is an excellent website giving information about science in Antarctica.

Use it to find out about:

- 1 the types of animals and plants in the Antarctic ecosystem, what they feed on, their predators and how they breed
- 2 how the organisms survive the harsh conditions of the Antarctic ecosystem.

Antarctica webcam
Want to find out what the weather's like at Mawson Station today?

There are many other good websites on Antarctica. Type *Antarctica* in your search engine.

The 'How to use this book' explains the structure and key features of the textbook. Students should use it as a tutorial at the beginning of the year so that they become familiar with the various features.

How to use this book

To help you get to know this textbook and the CD that comes with it, read through the numbered blue boxes one at a time and work through the questions in the green boxes. If you work in a small group you can discuss your answers with other students.

- 2 Turn to the contents page at the front of the book.

How many sections are there in most chapters?
Which chapters are about living things?
In which chapters would you find information on:
a chemical reactions c volcanoes
b galaxies d plant cells

- 3 The index on pages 312–314 is also very useful for finding things in the text.

On which page would you expect to find information on:
a Pluto
b Sir Isaac Newton
c properties of oxygen?

- 4 At the beginning of each chapter there is a section called **Getting Started**. Have a look at a few of these.

What do you think is the purpose of **Getting Started**?

- 5 Find the heading **2.1 Inferring and predicting** on page 24. This is the first section in Chapter 2, and continues until page 28. Note that there are bits of text to read and illustrations to study.

Important new words are in bold type. If you want to find out what a word means you can look it up in the glossary at the back of the book.

Find the words in bold type on pages 24 and 25. Look one of them up in the Glossary.

6 Note the **Investigate** on page 26 on a specially designed page. You should always read an investigation before you do it. To help you make the most of the investigations and to check safety issues there is a **Planning and Safety Check** at the beginning of most investigations. Make sure you do the **Discussion**, to check that you understand what you did in the investigation. In some investigations you have to design your own **Experiment**, for example on page 40.

Most investigations have four headings.
What are they?

7 Throughout the book there are **Activities** on a blue background. See page 258, for example. These don't need much time or equipment, and some of them you could probably do at home.

Suppose you wanted to do the activity on page 258. Make a list of the things you would need.

8 The book has a special feature called **Skillbuilder**.

Have a look at the Skillbuilder on page 13. What skill is it teaching you? Can you find another Skillbuilder?

9 When you reach the end of a section you do some or all of the **Check!** questions to check that you understand what you have read and done in class. Look at the questions on page 27.

Which of the five questions do you think is the easiest? Which is the hardest?

The **challenge** questions on page 28 are more difficult than the **Check!** and you have to think more for yourself. You need to do well on the **Check!** before going on to these.

10 In some sections there are also **Try this** activities you might like to do if you are interested and have the time. See page 47, for example. There are also **WEB watch** sections throughout the book to help you in your research. See for example the **WEB watch** on page 67. Go to www.scienceworld.net.au to find the links to help you do a science project.

11 Each chapter has several **Working with technology** sections which include animations and crossword puzzles that you can do on the CD.

On the CD, open the animation for Chapter 1 to see how to light a Bunsen burner. Can you find the crossword puzzle for Chapter 1?

12 At the end of each chapter there is a summary called **MAIN IDEAS** for you to copy and complete. See page 21. You can check your knowledge and understanding of the ideas in the chapter by doing the **REVIEW** on pages 21–22. In this chapter there is also a **LAB REVIEW**.

Which of the test items on pages 21–22 do you think is the easiest? Which is the hardest?
Try Question 1 of the Review on page 21, then check your answer on page 298 at the back of the book.

Notice that if you get the wrong answer, you can go back and check the text on page 7.

We hope that this book and CD make science interesting for you.

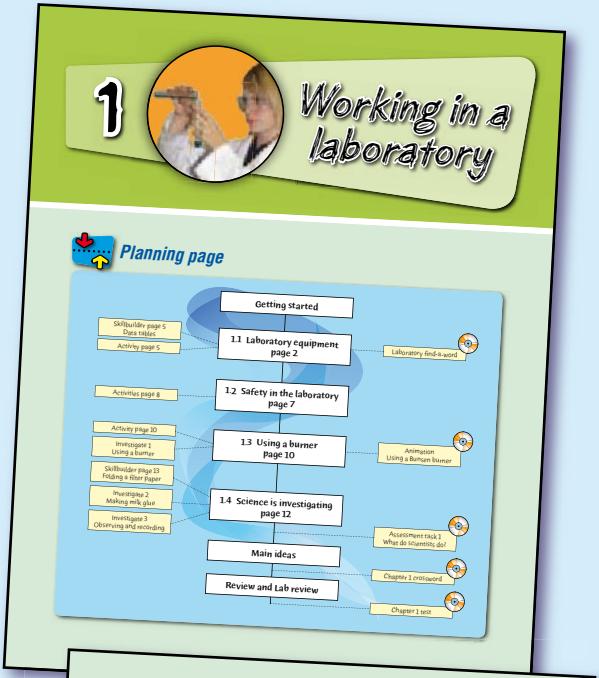

**Peter Stannard and
Ken Williamson**

Using the Teacher Edition

The Teacher Edition contains the student text as well as comprehensive and practical support for teachers in their day-to-day teaching. The following is a guide to the features of the Teacher Edition.

Planning page

At the beginning of each chapter is a flow chart to help plan the unit of work based on the chapter. It gives an overview of the chapter and shows where the Activities, Investigates, Experiments and Skillbuilders fit. It also indicates where the animations, crosswords, assessment tasks and chapter tests can be used.

Essential Learnings

The grid on the second page of each chapter links the Essential Learnings to pages in the textbook, the workbook, and also to the assessment tasks on the CD. It lists the *Knowledge and understanding* to be developed in the chapter and the key *Ways of working* used by students to develop and demonstrate this knowledge and understanding.

Vocabulary

The vocabulary list highlights key words that are used in the chapter, especially the words that students may have trouble spelling.

Focus for learning

The Getting Started at the beginning of each chapter provides a real-world learning focus designed to motivate students to engage with the topic. It also provides an opportunity for teachers to use a constructivist approach where you find out what students already know and then allow them to construct new understandings or consolidate their current understandings. The focus for learning statement on this page is summarises the chapter's Getting Started.

Equipment and chemicals

This section is designed to help the laboratory technician prepare the equipment and chemicals needed (per group) for the whole chapter. Each Investigate and Experiment in the text has a materials list, but the teacher edition has a complete list for the whole chapter, including the Activities. Special preparations (eg limewater) are given where needed.

Essential Learnings for Chapter 1			
Essential Learnings	Student book (page number)	Workbook (page number)	Teacher Edition CD (Assessment task)
Knowing and understanding Students know and understand that when undertaking investigations, safety audits should be conducted and their results applied. The reliability, accuracy and efficiency of a scientific investigation are enhanced by selecting appropriate equipment, tools and techniques. Data and information should be presented using accepted formats and conventions (e.g. tables and graphs).	Pages 7–10 Investigate 1 page 11 Investigate 2 page 14 Investigate 3 page 16	page 6 page 8	
Skills Students become familiar with the science laboratory by drawing a large floor plan showing the position of various items (page 1).	Pages 2–6 Skillbuilder page 13	pages 6–7 page 9	
Ways of knowing Choose scientific equipment and technologies to enhance the reliability and accuracy of investigations. Present scientific data and ideas in appropriate genres using scientific terminology, symbols and conventions.	Pages 12–15 Investigate 2 page 14	pages 10–11	
Vocabulary apparatus conclusion corrosive data decant disposal equipment generalisation hydrochloric laboratory observation position safety	Pages 4–6 Skillbuilder page 13	pages 7–14	
Focus for learning Students become familiar with the science laboratory by drawing a large floor plan showing the position of various items (page 1).			
Equipment and chemicals (per group) Investigate 3 page 16 Part A: 8 pieces of numbered equipment Bunsen burner, heatproof mat, matches, piece of copper wire, metal tongs, 200 mL beaker Skillbuilder page 13 Investigate 2 page 14 100 mL skim milk, 25 mL white vinegar, 3 g baking soda, two 250 mL beakers, spatula, stirring rod, filter funnel and paper stand and clamp for matches filter (filter stand), Bunsen burner, tripod, gauze mat, heatproof mat, matches Investigate 3 page 16 Part A: limewater, drinking straws, flask Part C: test tube, small piece of zinc, dilute hydrochloric acid (1 M) hydrochloric acid (1 M), sodium thiosulfate crystals (syrup), dilute Part D: ink pad, methylated spirits and paper towel (for clearing up), hand lens			
Special preparations Investigate 3 page 16 To make limewater, add about one teaspoonful of sodium calcium hydroxide ($\text{Ca}(\text{OH})_2$) to one litre of water. Shake or stir to mix and allow it to stand overnight if possible, and then filter off the solid.			

Starting point

- 1 Ask students to develop concept maps around key words such as *science, safety, experiments and equipment*.
Note: if students are not familiar with concept maps (mind maps), refer to page 35 of *ScienceWorld 1 Workbook*.
- 2 Ask students to describe what they think *working scientifically* means. They could draw a Y-graph using headings such as *describe, feel and sounds like*. To construct a Y-graph, draw a large Y in the centre of a page with a heading in each of the three sections. Students place a series of descriptor words or sentences in each section. For example, in the *describe* section students might write *experiments, lab coats, tests, test tubes, chemicals*.
- 3 Start the lesson with an exciting demonstration full of colour or noise to create an engaging environment. For example, you could demonstrate burning magnesium (with safety precautions), adding acid to magnesium or using universal solution in acids and bases.
- 4 Set up the laboratory with biological specimens and posters to assist visual learning.

Starting point

These teacher notes, placed next to Getting Started, provide further help with planning the chapter and introducing the topic to students. They suggest ways of finding out what students know already, for example by using concept maps. They also include teacher demonstrations, brainstorming and discussion ideas, and suggestions for the use of multimedia.

Hints and tips

Throughout this Teacher Edition there are numerous hints and tips to make teaching more effective. Some of the suggestions can be applied generally; for example, the think/pair/share and inquire/respond/reflect strategies, and quick questions for revision.

Hints and tips

The following analogy is a useful way of explaining melting to students. Take a large lump of frozen peas out of the freezer and place it into a beaker with a small amount of water in it. While heating the beaker, ask students to explain what the peas breaking away is analogous to. The more heat is added, the more peas break away from the lump until they are all free.

Learning experience: liquids

To illustrate a liquid changing shape but not volume, place a drop of food dye in the bottom of a beaker then fill it with water so the class can see the water changing shape. Measure the volume. Now pour the beaker of coloured water into another larger beaker and again measure the volume.

Learning experiences

There are many suggestions on ways of extending the material in the text, as well as many extra activities. For example there are:

- teacher demonstrations
- teaching techniques such as Y-graphs, word walls and celebrity head activities
- ideas to encourage higher-order thinking
- ideas for making the classroom more visually stimulating
- quizzes and games
- creative writing ideas
- excursions and suggestions for visiting speakers.

Lab notes

Read through the instructions with the class and point out anything of importance.

Remind students about the safety issues and techniques for mixing chemicals. For example:

- use very small amounts of solutions (fingernail high)
- follow all instructions
- observe reactions carefully and record observations.

Make sure students prepare data tables to record their observations.

Allow for clean-up time. Cleaning up is just as important as preparing and doing practical work. Leave approximately 10 minutes for clean-up and putting equipment away. Students need to be aware of the correct ways to dispose of chemicals and to clean equipment.

Activity notes and lab notes

These are detailed notes on the Activities, Investigates and Experiments. The notes are written by experienced teachers and laboratory technicians, and focus on issues of safety and classroom management. There are also suggestions to help get the most out of each activity or practical.

Homework

Ask students to brainstorm some simple separation investigations that can be done at home. Students should be encouraged to describe what is being separated and the piece of equipment that is used to perform this process, eg kitchen sieve to separate large flour particles from small particles. You could also ask students to draw simple diagrams of their techniques.

Homework

These contain suggestions on what material in the text could be used for homework, as well as extra activities.

Animation and assessment task reminders

Where appropriate, there are reminders about using the animations on the student and teacher CDs, as well as suggestions on when the assessment tasks for each chapter could be given to students.

Research

Students might like to find out what a stomach ulcer is, how it affects a person and how it can be cured.

Research

These contain suggestions for research questions and how students could report their findings, eg posters, newspaper articles

Solutions

Answers are provided for Check!, Challenge, Main ideas and Review, and these are placed as near as possible to each question.

Issues

Organise students into groups of 4 or 5. Each group is to tackle the problem of atmospheric carbon dioxide and global warming from a particular point of view.

These perspectives could include those of:

- an environmentalist
- a power station owner
- an average person
- a meteorologist
- a politician.

Students should showcase their findings and present an argument to support their case.

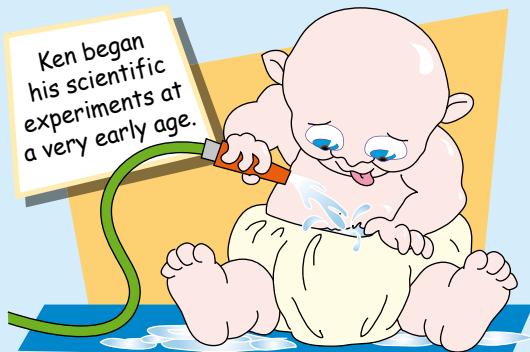

Hold a whole-class discussion on ways to reduce greenhouse gas emissions.

Essential Learnings checklist (by the end of Year 9)

Ways of working	ScienceWorld 1 chapters	ScienceWorld 2 chapters
Students are able to:		
Identify problems and issues, formulate scientific questions and design investigations	2, 3, 8, 11	1, 3
Plan investigations guided by scientific concepts and design and carry out fair tests	4, 8	1, 2, 9
Research and analyse data, information and evidence	7	6, 7, 9, 12
Evaluate data, information and evidence to identify connections, construct arguments and link results to theory	4, 6, 10, 12, 13	2, 3, 4, 5, 7, 8, 11, 12
Select and use scientific equipment and technologies to enhance the reliability and accuracy of data collected in investigations	1, 2, 4, 8, 9	3, 6
Conduct and apply safety audits and identify and manage risks	1, 3, 8, 11, 12	4, 8, 10
Draw conclusions that summarise and explain patterns, and that are consistent with the data and respond to the question	3, 4, 5, 6, 8, 10	1, 2, 5, 8, 9, 10
Communicate scientific ideas, explanations, conclusions, decisions and data, using scientific argument and terminology, in appropriate formats	1, 5, 7, 9, 10, 11, 13	1, 4, 5, 7, 8, 11, 12
Reflect on different perspectives and evaluate the influence of people's values and culture on the applications of science	6	13
Reflect on learning, apply new understandings and justify future applications		6, 11, 13
Knowledge and understanding		
Science as a human endeavour		
Responsible and informed decisions about real-world issues are influenced by the application of scientific knowledge.		
Immediate and long-term consequences of human activity can be predicted by considering past and present events	2, 12	10, 11
Responsible, ethical and informed decisions about social priorities often require the application of scientific understanding		9, 13
People from different cultures contribute to and shape the development of science	1, 4, 5, 6, 11, 13	1, 4, 9
Earth and beyond		
Events on earth and in space are explained using scientific theories and ideas, including the geological and environmental history of the earth and the universe.		
Scientific ideas and theories offer explanations about the earth that extend to the origins of the universe	6	12
Global patterns of change on earth and in its atmosphere can be predicted and modelled	3	13
Geological evidence can be interpreted to provide information about past and present events	13	7

Knowledge and understanding	ScienceWorld 1 chapters	ScienceWorld 2 chapters
Energy and change Forces and energy are identified and analysed to help understand and develop technologies, and to make predictions about events in the world.		
An unbalanced force acting on a body results in a change in motion	4	7
Objects remain stationary or in constant motion under the influence of balanced forces	4	
Energy can be transferred from one medium to another	12	3
Transfer of energy can vary according to the medium in which it travels	11	3, 8
Energy is conserved when it is transferred or transformed	11, 12	8
Life and living Organisms interact with their environment in order to survive and reproduce.		
The diversity of plants and animals can be explained using the theory of evolution through natural selection		11
In ecosystems, organisms interact with each other and their surroundings	7	11, 13
Complex organisms depend on interacting body systems to meet their needs internally and with respect to their environment	9	5, 6
All the information required for life is a result of genetic information being passed from parent to offspring		6
Changes in ecosystems have causes and consequences that may be predicted	7	13
Natural and processed materials The properties of materials are determined by their structure and their interaction with other materials.		
Changes in physical properties of substances can be explained using the particle model	10	2
Matter can be classified according to its structure	8	4, 9, 10
Chemical reactions can be described using word and balanced equations	3	2, 4, 10
Reaction rate is affected by various factors, including temperature, concentration and surface area	3	2

Source: QSA *Science Essential Learnings by the end of Year 9*

There are many opportunities throughout *ScienceWorld* to develop Essential Learnings such as planning investigations guided by scientific concepts or designing and carrying out fair tests.
